Comments: Choice of Alternative One

I am emailing to voice my choice in the Alternative One to save the Tongass National Forest from the logging industry. The giant and ancient trees that make up the forest are crucial to this planet's environment along with the Alaskan ecosystem and wildlife.

These trees are 1,000 years old, and once destroyed for an industry that has already proven to not be sustainable, cannot be replaced. Likewise, new roads for logging will destroy salmon fisheries.

With the Trump Administration having written Executive Orders that seek to bypass environmental concerns for economic pursuits, and this administration already having destroyed thousands of miles of our country's beautiful ecosystems, I hope that this email will serve to encourage Alaskan policymakers and politicians to save the Tongass National Forest from further logging with Alternative One.

The Tongass National Forest plays a key role in maintaining and saving our planet. Those ancient, old-growth trees help save our planet when politicians actively work to destroy it. I hope that Alaska will make the right choice.

Thank you for taking the time to read this email, I look forward to following this issue.

Yours,

Margo Sophia
