Title:

Comments: I do not support the Forest Service to refuse to identify the specific places they intend to cut trees, apply herbicides, and light fires in the formal project review, so they would be able to do those things across a fifth of the entire Chattahoochee National Forest without having to listen to the public. PLEASE do not allow this to happen.

Over the years, people like me who care about forests have written to the Forest Service, and our comments have saved majestic oak forests, kept mud out of trout streams, and preserved vistas for the enjoyment of everyone. I do not agree with this change to the process of collecting public comments before changes can be made to the forests we enjoy so much.

Susie Stevens
