Comments: Valle Seco land swap

It appears to me, that Parcel 10 gives up public access to a long portion of the middle fork in exchange for a much short section. As an avid fisherman in this area I would strongly object to this exchange. Parcels 1 and 3 essential isolate pieces of the National Forest with no public access. Parcel 7 blocks access to the forest and some routes into the wilderness. Parcel 9 straddles the road to Fish creek, is access maintained? Overall I see little public benefit, but lots of benefit to private owners.

1) no additional river access is gained.

2) the elk migrate across Valle Seco whether or not it public or private.

Sincerely,

Stephen Keil
