Comments: As you are proposing 60,000 acres of logging and chemicals application, untold temporary roads, 50,000 acres of prescribed fires, and up to 111 miles of trail reroutes, you want approval of this general Environmental Assessment before any site level analysis of potential impacts to soils, streams, trees, wildlife and recreation. If that happens, we the Public will be signing away our legal ability to be involved for the next two decades or more. Even though today's Forest Service includes many knowledgeable and dedicated individuals, there is no guarantee that the Forest Service will be the same in ten years let alone 20. Please do not allow this to happen. These forests belong to us, please do not make these decisions without providing more specific information so we can provide input. We the community have a lot of knowledge and desires and deserve to know more and provide input.

You need to give the public site specific information before making a decision.

· Adjacent land owners should be able to tell if the Forest Service is planning to spray herbicide in their backyard.

· Mountain bike riders should be able to tell if they are planning to burn along their favorite trail.

· Trout fishers should be able to tell if they are planning to log around their favorite stream.
