Comments: Laurin Famerfarmerfreshairsolutions@gmail.com12/1/2019Mr. Robert Potts,I am quite disturbed to hear the news that there are plans to overtake large amounts of acreage of Texas National Forests for fracking purposes. I urge you to fully consider the irreversible consequences and effects that will come with these actions. Fracking pollutes our waters, largely effecting our wildlife, ecosystem, and unfortunately, our families. Being born and raised here in Lufkin, I feel it is my duty to inform and make aware the concerns I have for my friends and family members that reside in Angelina County and surrounding counties, one being my two year old daughter. I wish to raise my daughter in Texas because of our high levels of freedoms and rights. How sad it would be, to move my family from my home town, and possibly Texas as a whole, because our waters and ecosystems would be polluted and damaged beyond repair. I hope and pray that your heart is in the right place, that you are not being driven by money, but better yet, what's best for our town and our community. Our health matters. Our families matter. Preservation of the water and land we live on/in matters, especially when ensuring our children and future generations have livable conditions and aren't left in ruins and our messes. Please make the right decision and decide against these plans that will force knowledgeable Texans out of their homes, in Hope's to find cleaner, sustainable, and more livable conditions for their families."KEEP TEXAS BEAUTIFUL""DONT MESS WITH TEXAS"Fracking is messing with Texas and IT WILL DESTROY our beautiful state.Thank you for your time and consideration of my deep concerns.Local Lufkinite,Laurin Farmer.
