Comments: I agree with conservation and management plans that decreases fuel for forest fires and sediment in rivers and streams. I DO NOT agree with decreasing availability and access to national forests by closing or decommissioning access roads

I am greatly disturbed that better efforts to inform the public about the specifics of the planned use of chemicals, burning, etc. gave not occurred.

It would be more helpful if the USDA followed public notification procedures required of local county and state governments such as publishing notifications in the legal county organ. . I heard through rumor that this proposal exists and by chance found the public comments portal.
