Comments: To whom it may concern

Please save our public lands. We need our trees. They provide air for people, they provide homes for animals. We barely have any virgin forest left in Georgia and surrounding states. As for chemicals, we have enough of those contaminating our food. It effects are rivers and streams and in turn hurts our animals. How would you like to eat a fish that's full of chemicals? Do you want cancer? It's also a problem when an animal is consuming chemicals and then another animal eats their prey. They become contaminated and then they die. It's really sad to watch them suffer. How would you feel if that happened to you? It's not right to take our public lands which currently people enjoy our clean waters and amazing forestry.
