Title:

Comments: Global Warming is fueled by fossil fuel use. This has been known since the 1970's. the first recognition of the damage from fossil fuel use was recognized in the 1880's. Now there is a Climate Crisis because of the lack of progress in the reduction of fossil fuel usage. Allowing the building of the proposed pipeline will advance this crisis and destroy publicly owned land. The land managed by the USFS is owned by all the citizens of the USA, yet their objections are ignored. What will it take for the USFS to realize what a mistake this plan is? Once this bay is destroyed it will be damaged forever. Promoting the increased use of fossil fuels is in the interest of the company , not this country or its citizens nor the environment. This is not the purpose of the USFS, this is not a Land of Many Uses.
