Comments: I wish to comment regarding the Foothills Landscape Project. Specifically, I stringently object to disallowing public input and objections before actions are carried out.

I also stringently object to applying herbicides in large scale applications. Such applications should be done in specifically focused situations only. This plan just opens us up to unintended consequences.

And finally, I object to prescribed burning and increased logging. This is antithetical to a natural environment. We can't just turn out forests into golf courses.
