Comments: From what I understand this Foothills Landscape Project #52509 is extremely large and very undefined. There needs to be definite boundaries and timelines linked to this proposal and it's implementation. There also needs to have options attached to define scope in the implementing of the re-landscaping of our heritage. The term "blank check" has been applied to the current process. This doesn't sound right. It sounds to far out of hand and not many options to slow down this massive sounding undertaking. Time limits should be place to evaluate the Project's value and impact while still allowing for changes and reining in if necessary. We need more information.
