Title:

Comments: If the livestock industry cannot coexist with native wildlife on the Thunder Basin, all livestock must be removed, and replaced with free-roaming bison.

"Management" of prairie dogs should be limited to nonlethal translocation of prairie dogs to repopulated areas where their population densities are low, and a blanket authorization should be granted to dust for flea control in areas where fleas carry sylvatic plague, which decimates prairie dog populations.

Prairie dogs are a Sensitive Species that must not be poisoned or shot anywhere on Forest Service lands
