Title:

Comments: To whom it concerns,

I understand the need for control burns and removing dead trees from our forest. However, I feel you are taking this to extremes. The herbicides will poison will pollute our streams and rivers. It will be a danger to our wildlife and fish. Which will be passed on to we humans who select to eat from the land. This could also endanger our bees as well. You as the forest service are supposed to protect our forest, however, I feel like we need to protect the forest from you.

Please take in to consideration our grandchildren and futures generations

Thank you,
