Comments: This proposal is reckless and detrimental to the public asset as well as public trust. This land belongs to the people of the United States. Yes it is a multi use property, however the people need a voice in how the land is used. Private interest has proven time and time again to take advantage of opportunity to the detriment of communities and environment.

There will be no benefit to the public or to the land by privatizing these decisions. The proposal is a shameful power grab with blatant intent to manage the land in a way that it's public owners simply would not approve of. It cannot be approved.
