Comments: I would like to voice my wholehearted disapproval of the plan to implement the Foothills Landscape Project. This project is entirely too large in scope and does not allow for adequate public oversight.

While I am aware that our national forests are to be managed and not preserved like our national parks, it is important for the public to have a say in the forest's resources are used. The Foothills Landscape Project would allow forest managers to make important decisions about the forest without oversight for years to come.
