Comments: Mustelids are an incredible part of our ecosystem and just as important as they are fascinating. By destroying the food chain of the black footed ferret you are allowing a holier than thou approach that humans have taken to nature. This is not a decision you are making from a point of science, but rather muddled by the love of sport killing. We have enough animals disappearing from our planet on a daily basis, why not be better and allow something that has just as much right to live as you do, to live its life to its fullest.

Please reconsider any thoughts surrounding the decimation of a beautiful animal
