Comments: To whom it may concern,

I add my voice to those requesting a denial of the proposed forestry plan for the Chattooga National Forest. What our nation needs most for its health and its future is clean, wild land preserved and cared for. The proposed logging that this plan allows for would have tremendous impacts on the ecology of this forest. A forestry plan that includes regenerative and careful tending practices and greater consideration and protection of the wildlife should be put forward.

May we steward these precious resources with great care and consideration for the health of the land we all depend on and for the generations to come.

Thank you for your consideration and support.
