Comments: I would have thought this was common sense but obviously it is having to be told to you by how many people for you to care SMH

We need the prairie dogs for the ferrets.

You dont like perrie dogs right well the black footed ferret eats perrie dogs and they are endangered. So am I starting to make sense to you??

Let the ferrets eat the prerrie dogs. 2 birds 1 stone. You get the prerrie dog population under control and the black footed ferrets that by the way are endangered gets to keep their food source
