Title:

Comments: Georgia trout waters will be devastated by this action. They are the southern most trout waters in the eastern US and generate both pleasure and income, in the form of tourism, for the state. These areas were protected from these types of action for the people not for big business or as a source of income for private business. If the area needs work done for environmental reasons then create the jobs for responsible control of our forest. It's government controlled land, not owned!
