Comments: As one who lives in the foothills landscape project region I would offer my support for the Foothills project. No only do I live in the region but grew up here as well. I have many fond memories of hunting in fishing in the Chattahoochee National Forest. I support the work of creating more diverse and resilient forests through active timber management. Opening the canopies and putting fire back onto our landscape will improve wildlife and plant diversity, improve habitat for rare species, protect communities on the wildland interface and help create a multi use forest that will provide recreational opportunities for all Americans that wish to visit our national forests.
