Comments: Please save our precious native keystone prairie dog species who support over 200 species of wildlife that depend on the prairie dog colonies for their survival! Our public lands is for the people who enjoy protecting our wildlife not for the use of low income ranchers who's cattle are invasive to the land also destroying our wildlife habitat disturbing the balance of elk and other animals we need to protect our wildlife Praire dogs are a key component in our ecosystem we should have bison roaming our grasslands not cattle we need to protect our precious native keystone prairie dogs who are truly compassionate family oriented and create other nutritious grasses for other species of wildlife also homes for the ground owls rabbits badgers Black footed ferrets who are close to extinction due to lack of prairie dog colonies that is their main staple is prairie dogs also many other species of wildlife depend so greatly on the prairie dog colonies coyotes foxes raptures eagles hawks ect the prairie dog colonies create islands of habitats Like I have mentioned for over 200 species of wildlife also their complex burrow systems aerate the soil making it more fertile for various plant life and the prairie dog dung puts nitrogen into the soil please save our prairie dogs vs giving into huge corporations and their only goal is greed ! Do not poison shoot our prairie dogs it's so inhumane lack of morality these are gods creation relocation is much better if needed save our wildlife please !
