Comments: This proposal is an awful idea. The national parks and reserves were created to protect them from exploitation from logging, mining, and development. It is disgraceful how this current administration is selling out our natural wonders to any mining, logging or oil company that comes along. Combined with the lack of oversight from environmental regulators that have been neutralized or fired by this administration, ecological & environmental disaster is a fore gone conclusion. It seems to me that the mentality is "well, climate change & the environment are too far gone to save, we might as well make some money off it."

I'n conclusion, please do not sell out our national parks and reserves, and especially do not sell them out for the profit of logging, mining and/or oil companies.
