Title:

Comments: This project needs to be well defined prior to approval. I would recommend a rework of the proposal with a clear scope of work and open sessions for public feedback. As currently designed, things are open ended and could go on for decades. Instead it should be blocked into 1-3 year scopes of work so that the public can clearly see the areas of impact and provide input. These activities, while necessary are inherently impactful on the people and animals who use this land.
