Comments: This proposal is long overdue to manage the area for wildlife habitat and timber. Past wildfires should show that some prescribed burning is needed for all aspects of management, a wise and prudent proposal is in this plan.

Management actions have to begin somewhere in a planning process and should always be able to revise as needed or/and when new on the ground information becomes apparent to the professionals implementing the forest management activity.

Hopefully this will be implemented. And any past mistakes such as the Trail of Tears damage will be corrected ASAP to fulfill the responsibility the USFS has been given.
