Comments: Timber management and improvements when done correctly, would greatly reduce the fire risk and improve the wildlife habitat for years to come. The lack of rotating timber and cutting has caused a closed canopy and there is less new growth potential without clearing the older, less desirable trees. Use the funds generated from the timber to fund improvements to roads in the National Forest and surrounding areas, create more wildlife openings(fields/food plots), make new nature trails and parking areas in the loading decks of the timber areas and don't just leave it a blank clear cut that's an eye sore for folks visiting that do not understand the benefits of TSI and proper forestry projects.
