Title:

Comments: Please do not approve this project!! It could strip vital nature preserve lands of their natural ecosystem and destroy lands permanently. It could potentially take hundreds, if not thousands, of years to undo the damage done in a relatively short amount of time (30-40yrs). These lands are natural habitat for many species of wildlife and are enjoyed by many people who care greatly about these resources. Once this project is started, the damage can not be undone. These lands are 'protected' by the government as federal assets and should NOT be used to fill quota of required resources. Others measures should be utilized, not our nature preserve lands!
