Comments: I own 70 acres of open hardwood after the acorns are gone the deer leave . There are no rabbits , quail and only a few turkey from time to time . I know if i cut the tumber it would help the animal's because i have hunted clearcuts that have be planeted in pine . I agree with the foresters that is what's need . Take in consideration if it's not being controlled burned from year to year the rest of the country and world are showing us what can and will happen here by wild fires. My only concern is the goverment will do this as they do everything else only half a job . I fear they will cut the timber and then not appropriate funds to finish the job . If you write in favor of this proposal by also ready to pressure you Senate and Congress for the money to the forestry department so they can do their job.
