Comments: Before this project comes to affect, more specifics need to be given to the public. I feel like most people who use the CNF and see posts about this only see that it will reroute trails and tear down some forest. They are not getting the full details. This project seems to have the CNF's future in their best interests and the public's negative views of it due to lack of information will create problems with taking action or finishing the project. All I'm asking is more information about where specifically the project will take place and the overall benefits of it.
