Comments: Please reconsider this massive project that would for decades to come change the landscape and public access to these beautifully protected lands. These forestry lands are the only way for such a large majority of us to connect with nature and escape the city, work and digital distraction.
The ability for so many family's to teach our younger generations about the importance of preserving this natural wildlife would be stripped away by the logging, road construction and general disturbance to the land and wildlife. Please keep our few remaining natural beauties alive and well.
