Comments: To whom it may concern:

While I understand that forests need to be managed, the scope of work planned seems very wide open. It appears that the Forest Service will be able to decide which section of land will be used for each job and public opinion does not seem to be taken into account for those decisions. Since this is public land, I do not agree with that path forward. This could have a negative effect on tourism and local businesses. Please consider narrowing the scope of work, or including more public opinion on the work planned.
