Comments: To Forrest Service:

I have a big concern with the Foothills Landscape plan for pesticide applications on over 65,000 acres. It makes sense some small use of herbicides may be necessary, but the HUGH amount of Forest that will be treated with chemicals under the Foothills plan is Extreme and scary. I do not support this plan to allow these chemicals into our forests for the next several years despite the scientific evidence of herbicide effects on people and wildlife, including causing cancer,

Please consider alternative plans to protect our forests and the life they support.
