Comments: Subject: 2020 Thunder Basin National Grassland Plan Amendment #55479

Please understand that Prairie Dogs are a Keystone Species, and they are key to the support of the Black-Footed Ferret which is a very rare and highly endangered species. The Ferret depends on the use of the Prairie Dog habitat. So it is necessary to protect the Grassland for both of these natural wild species. Livestock on the Grasslands should be limited to Free-Roaming Bison.
