Comments: The area of the Chattooga river watershed is a delicate ecosystem, as many of us know. With already waning populations of Hemlock, due to the Woolly Adelgid infestation and other issues, such as the pollution of Stekoa Creek from Clayton's upstream impact, I believe it is the job of the national park service to protect this land by reducing impact entirely on the region. A freeing agreement to log, inject herbicides, and impose controlled burns is not a good solution, particularly for maintaining the quality of the stream itself.
