Title:

Comments: I strongly support Foothills Landscape Project #52509. Wildlife and forest management on the CNF has been neglected for far too long. Deer, small game, song birds and ruffed grouse in particular have suffered major declines with the current lack of management. Early successional habitat is critical to many wildlife species. Diversity of habitat creates a healthy thriving forest. Please initiate this project and lets bring back beauty, diversity and wildlife to the CNF.

Thank you,

Darron Britt
