Comments: Please start managing the NF's better by doing some logging and burning to allow for more types of habitat for the wildlife. Old growth forests are great to look at, but provide nothing for wildlife. I have hunted the mountains here in Northeast Georgia for over 30yrs and have never seen this much lack of wildlife. The deer are almost nonexistent, turkey numbers are way less than they used to be. Then you look at the numbers of illegally introduced hogs and bears are exploding. Also it would help to allow some access so trappers could help with coyotes and hog doggers to kill some hogs off. You guys have got to do something to help our wildlife before it's too late.....
