Comments: In regard to the Foothills Landscape Project and the proposed actions currently proposed in the plan I would like to offer my support. I spend a significant amount of time in the eastern portion of the proposed plan area and I certainly believe that it is long overdue for these types of ecological improvements. The lack of forest diversity found in the area is significant. The plan proposes to improve this in a variety of ways while still protecting sensitive areas. The benefits will be substantial for not only the forest flora but also the wildlife, both game species and non-game species. Again , I voice my support of the proposal. This definitely needs to be done. The forest is long past needing these management practices carried out. My hope is that you, the US Forest Service will see this through.
