Comments: We all know it takes hard work and preservation to make these lands around us enjoyable; not only for us , but for wildlife as well. Many will never see the damage already done, and or what it actually takes to keep up wildlife areas, streams , woodlands,grasslands,marsh areas, etc., and what steps are needed to insure a better quality of life; and preservation of life for all species. With population growth and a decrease in natural resource support efforts; its obvious that some how work needs to be put into action for this preservation. Our fathers left this land enjoyable for us; in return lets manage, manicure and preserve this heritage for our children and grandchildren to enjoy.
