Comments: This project is massive and seems awfully vague on some concerning details. Namely, the public deserves to know precisely which areas of the forest are being considered for logging and having temporary roads put in. Also from what I understand, this project is many times larger than most proposals made by the USFS. Frankly I'm opposed to such a large project to begin with, but at the very least we should have all the details before public input is closed. Thank you for reading.
