Title:

Comments: I am strongly in favor of timber thinning. It will help with our wildlife population in the mountains.

Unless there is a strong acorn crop. It will also help with the grouse population which has faded drastically over the years. I'm also in favor of controlled burning on our national forests. Thanks for having this and giving us a chance for our input. I wish it would have been more publicly advertised to where more people could have had the chance to fill out the survey. It was just luck that I happened to see it.
