Title:

Comments: The geographical sweep of this proposed project is expansive, as is the variety of potential environmental impacts. Also, the time-span over which specific activities would be carried out is extremely long. Therefore, I request that a full EIS should be prepared, especially to enable the public to have an opportunity to review and comment with greater detail on all aspects of the project. The issuance of a FONSI in this case would be unfounded and an affront to meaningful public participation. Thank you very much for providing me with this opportunity to comment. I look forward to reviewing and commenting on the full EIS.
