Comments: Okay, I'm good with timber harvesting IF you plant replacement trees. Also good with controlled burns and grinding vegetation. Good with the bulldozed paths as well. All of these will help prevent those huge massive destructive forest fires. What I'm not okay with this the herbicide application. I get that it's to rid the area of invasive species BUT it will also rid the area of native species as well! And any animal that feeds on these plants will be poisoned.
