Comments: Dear Sir or Madam,

The property that my home is built on borders one of the parcels contained in the Foothills Landscape Project #52509. I am in support of maintaining forests in a natural state but I would like to know more specifics of how this is to be accomplished in the bordering property. Are the plans to cut trees, do controlled burning or herbicide spraying? Or perhaps this particular parcel is to be left alone. There is no way to tell from the info I have seen. Spraying herbicides is of major concern to me since the watershed for our well is largely from one of the parcels of forest service land included in this plan.

Of course, burning is always scary when there are houses nearby.

I would greatly encourage you to get additional public input when the specifics are nailed down. Please keep the public informed and seek comments. The people who live next to the forest service land should be informed before any action is taken.
