Comments: I would like the Foothills Landscape project to not be executed at this time. I would like more time to get specific plans for use of the herbicide commonly known as Roundup in this forest and watershed area of the Oconee Forest. This product is a known carcinogen. I would also like for our County Commissioners to have more time to look at the impact this project will have on property values and lost habitat. This area depends on tourism for a large share of our economic fuel. This project is large and not specific enough to determine the total impact on our region in terms of wildlife, watershed and economic endangerment.
