Comments: I feel that there needs to be more research and detailed information on what is going to happen to these forests. I don't think the forest service has an idea ...a clear idea on what to do with these forests and I think it's being rushed through. there doesn't even seem to be a budgetary interest on what some of the costs are for the studies etc. and I believe there' are toxins that will be involved that consequences are not even realized yet on the effects that they will have on the environment.
There has been good public response and concern with very little response from our local forest service woman it seems that they've made up their mind and it doesn't really matter what anyone says and I don't think that's the way the United States is run. As one who's lived in the mountains for 35 years and been in active environmentally and politically this procedure and this initiative seems suspicious to me and I'm generally not like that . Thank you... I hope you pay attention to the citizens wishes.
