Comments: I am deeply concerned about the proposed changes for the GA Foothills Landscape Project that have the potential to ruin spectacular vistas, trails, waterfalls & habitats. The lack of transparency as to the locations of the temporary roads,
which acres will be logged, who receives payment for the timber harvested, as well as the vast acreage that will be contaminated by herbicide is problematic.
The US Forest Service was created to protect forests and their habitats; this proposal is a repudiation of the agency's original mission.
The damage proposed can't be undone; soil erodes, chemicals poison water sources, plants and animals die. Someone is making money off this proposal; the question is who?
