Title:

Comments: The stated purpose of this project: to maintain or restore biologic integrity, connectivity, resilience, and soil and water quality sounds perfect but without any details as to where and how the various logging, road building, etc. activities are to be conducted, how can anyone realistically evaluate whether these goals will be achieved? Furthermore, having the public comment period closed before any specifics are released is inappropriate. I object to this project based upon the lack of details provided and in general consider this a potentially disastrous undertaking for this sensitive area. I urge the Service to delay any implementation until specific plans are developed, environmental impacts are determined, and the public has the opportunity to be heard on the total plan.
