Comments: It is my understanding that the Forest Service has not indicated in detail the method, scope, or location of road building, prescribed burns, and logging that will take place. I also understand that the Forest Service wants blanket approval to use herbicides without stating the purposed, location, target species, amount, or cleanup plans if there is a spill. Perhaps this is a communication issue. However, I am writing to ensure that proper public notification and participation processes be followed as well as communication of an exact and clear plan for the approval you are seeking.

Thank you.
