Title:

Comments: Background: The future of fossil fuels is very short due to the adverse impacts they create when burned, emitting greenhouse gasses. These emissions must stop or else we're all dead.

This pipeline traverses sacred Indigenous grounds which will be desecrated by the excavation. Further the loss of trees along the right of way will contribute to global warming by eliminating trees which consume CO2.

The LNG terminal poses great potential threat to the community of Jordan Cove due the explosive force of LNG in the event of a fire. The probability of such an event is not minor given the recent examples of U.S. refinery explosions and fires.
