Comments: I strongly object to clear cutting our forest for the gas pipeline. Before I say anything more I ask all the people who are involved in making this decision to please just take a few minutes and think about your children and grandchildren. Global warming is real and it will make life for our children so dangerous and difficult for our children. They will never enjoy the beautiful clean air, and water that we do. They will deal with more forest fires, smoke, and weather disasters than we have ever known. Please stop thinking about money and jobs and think about them when you make your decision about this. LNG and other fossil fuels are a danger to our planet. It is clear that fossil fuels are destined to be non profitable in the near future. The cost to the environment is too high and as communities and countries become more aware of this and as stockholders demand a return on their investment fossil fuel companies will need to change the way they work.

The Jordan Cove refinery will just increase fracking which will contaminate drinking water in communities throughout the country, and the methane venting, flaring, and leakage that occurs in the process may make it worse than coal in contributing to greenhouse gas pollution.
