Comments: I support the forest revision option with identifying 14 suitable wild and scenic rivers. The North Fork and the South Fork Clearwater have numerous potential dam sites. I'd like to encourage the Forest Service to identify these rivers and suitable wild and scenic rivers. This would help protect the North Fork's cutthroat fishery and the South Fork's B-Run steelhead from dams or other water diversions. We enjoyed a road trip through the Magruder Corridor last summer which included some great camping on the Clearwater river. I am a native Idahoan who has a history of hiking and camping in these very regions which deserve protection!
