Title:

Comments: no grazing. no new roads. no chemical applications. no prescribed burns because they are worthless (see recent research emerson college paleontologists). no hunting or trapping. no logging. no mining or drilling. its time to preserve and protect instead of assaulting for nearby profiteers who want to profit from the devastation of this national land owned by 330 million americans. we are sick of the dastardly way that resources of this national land are treated as if they are there to be mutilated and mauled when preservation and protection is what is desired. re 291809285 attention zachary peterson in 2020-01186
